

Filters

A filter is the heart of all good pool circulation systems and there are no better available than the Dayliff range of pressure sand filters. Offered in two types, DX and CX, DX filters are more suited for domestic installations while CX filters are specially designed for heavy-duty institutional applications. All models are moulded from long-life GRP plastic incorporating easy-to-use six position multi-port valves and are supplied with graded silica sand media.

Filter Type	Max Flow (m ³ /hr)	Pool Capacity (m ³)			Pressure (bar)
		Light	Normal	Heavy	
DX Range					
DX500	10	100	80	60	2
DX600	14	140	115	85	2
DX750	22	220	180	170	2
DX800	25	250	200	150	2.5
DX900	32	300	240	180	2.5
CX Range					
CX500	10	65	50	35	3
CX600	14	90	65	45	3
CX800	22	150	110	70	3
CX900	32	210	160	100	3

NB. Given capacities for CX filters are for commercial pools. CX filters can also be used for lighter duties at the given DX pool capacities.
